

POINTERS FOR A SUCCESSFUL SESSION

- Define and agree upon any (new) targets based on your role in your region.
- Continuously search for any spatial issues specific to your role in your region. (Stay on your toes: This is a living system!)
- Try to come up with possible ideas to solve a spatial issue. Draw possible ideas on the paper maps first.
- Confer with the rest of your team and the other teams to try to implement a suitable solution. If that involves an international shipping lane, call for an IMO meeting (which can take no more than 10 minutes).
- Keep track of the time you have to get a plan implemented in the software!
