

# MSP Challenge 2050

## NorthSEE edition

- **Shipping lanes** are for shipping, as governed by **IMO**.
- Consider **safety distances around shipping lanes** of min. 500 meters to reduce risks of e.g. power failures or emergency turns.
- **Marine Protected Areas** (MPAs) are areas of avoidance for all other uses.
- **Conventional offshore wind farms** can only be built in areas up to **30 meters** deep.
- **Floating offshore wind farms** can only be built in areas up to **60 meters** deep.
- **Cables** should cross **shipping routes** as **perpendicular** (right-angled) as possible to reduce the risk of breakage in case of emergency anchoring.
- **Cables** should follow the **shortest** and **most direct** route to shore
